

Press Conference May 29<sup>th</sup>, 2018

Climate Change Truth Research Inc.

My research and funding request.

- 1. Ocean evaporation for better weather modeling.**
- 2. Amazon Rain-forest reforestation.**
- 3. Vertical and Horizontal Carbon Dioxide Diffusion.**

My paper published in the International Journal of Environmental Science and Development  
Volume 4 Number 9.

**Discovery: Reduction in photosynthesis correlation to carbon dioxide increase.**

Last Thursday I presented those findings at the 2018 Climate Change Conference in NYC. All the scientists at the conference agreed with the findings. Dr. Gbuje Daniel Chidubem the IPCC representative is taking my presentation back to the IPCC.

The recent rise of Atmospheric CO<sub>2</sub> is NOT caused by carbon emissions. They correlate to only 363 ppm. The cause is massive loss of photosynthesis mainly from the deforestation of the Amazon rain-forest. The correlation to Amazon rain-forest is perfect and continues today.

The deforestation started in 1950 and the CO<sub>2</sub> rise started in 1957. Over 2 Billion acres deforested. Because of this the rain-forest has changed to an oxygen sink and a carbon dioxide producer. Temporary loss of 1.5 to 2.5 trillion annual tons of carbon dioxide consumption. This is 45 times our output of 32 annual tons. The atmospheric winds mix the carbon dioxide very well, so the concentration stays constant. Stop the deforestation and burning in the Amazon rain forest now! We need to plant 100 million shrubs in the next two years by the government policy document at cctruth.org. Dr. Andy Miller of the EPA's Climate Change research group has given me complete responsibility to bring down Atmospheric CO<sub>2</sub>.

Additional findings:

Carbon dioxide does not freeze in the upper atmosphere.

The ocean is not a sink for Atmospheric carbon dioxide.

**Solution:**

We need to stop destroying the Rain Forests. All nations need to put pressure on Brazil and all south America to stop this.

- 1. Moratorium on Rain-forest deforestation starting now! Not one more acre.**
- 2. 10-year delay in burning. Then 10% per year for 10 years. Stop burning now!**

3. Plant native trees and shrubs all over the world. 100 million new in 2018-2019. Increase Photosynthesis.
4. Stop deforestation in India and everywhere which is not sustainable.

## Rainforest facts.

### 2 Billion acres deforested since 1950.

#### Timeline

1. 1950 start deforestation
2. 1957 Atmospheric Carbon Dioxide started current increase
3. 1975 Earth warming started
4. 2017 to date over 800 million hectares (2 billion acres) have been deforested out of 70.4 billion hectares

**1 billion** tons of carbon dioxide annually into the atmosphere from biomass burning.

**60 billion tons** of annual carbon dioxide consumption lost photosynthesis

Massive decay causing the rain-forest to change to an oxygen sink and carbon dioxide producer.

We have lost 20% of Earth's Oxygen supply.

<http://www.sciencemag.org/news/2015/03/amazon-rainforest-ability-soak-carbon-dioxide-falling>

**This is an international emergency.**

City Sprawl cause of photosynthesis loss is 1 billion ton of carbon dioxide consumption per year.

Re: my presentation

To: research@cctruth.org

 You replied to this message on 5/28/2018 8:46 PM.

I will be going to meet them, Tomorrow, but I love your science and I would be happy if you can make a presentation through our online platform of any topic related to climate change.

You will have to send me a facebook friend request.

I will get the feedback for you.

Please send me your presentation too.

Press Conference May 29<sup>th</sup>, 2018

Climate Change Truth Research Inc.

My research and funding request.

- 1. Ocean evaporation for better weather modeling.**
- 2. Amazon Rain-forest reforestation.**
- 3. Vertical and Horizontal Carbon Dioxide Diffusion.**

My paper published in the International Journal of Environmental Science and Development  
Volume 4 Number 9.

**Discovery: Reduction in photosynthesis correlation to carbon dioxide increase.**

Last Thursday I presented those findings at the 2018 Climate Change Conference in NYC. All the scientists at the conference agreed with the findings. Dr. Gbuje Daniel Chidubem the IPCC representative is taking my presentation back to the IPCC.

The recent rise of Atmospheric CO<sub>2</sub> is NOT caused by carbon emissions. They correlate to only 363 ppm. The cause is massive loss of photosynthesis mainly from the deforestation of the Amazon rain-forest. The correlation to Amazon rain-forest is perfect and continues today.

The deforestation started in 1950 and the CO<sub>2</sub> rise started in 1957. Over 2 Billion acres deforested. Because of this the rain-forest has changed to an oxygen sink and a carbon dioxide producer. Temporary loss of 1.5 to 2.5 trillion annual tons of carbon dioxide consumption. This is 45 times our output of 32 annual tons. The atmospheric winds mix the carbon dioxide very well, so the concentration stays constant. Stop the deforestation and burning in the Amazon rain forest now! We need to plant 100 million shrubs in the next two years by the government policy document at cctruth.org. Dr. Andy Miller of the EPA's Climate Change research group has given me complete responsibility to bring down Atmospheric CO<sub>2</sub>.

Additional findings:

Carbon dioxide does not freeze in the upper atmosphere.

The ocean is not a sink for Atmospheric carbon dioxide.

**Solution:**

We need to stop destroying the Rain Forests. All nations need to put pressure on Brazil and all south America to stop this.

- 1. Moratorium on Rain-forest deforestation starting now! Not one more acre.**
- 2. 10-year delay in burning. Then 10% per year for 10 years. Stop burning now!**

3. Plant native trees and shrubs all over the world. 100 million new in 2018-2019. Increase Photosynthesis.
4. Stop deforestation in India and everywhere which is not sustainable.

## Rainforest facts.

### 2 Billion acres deforested since 1950.

#### Timeline

1. 1950 start deforestation
2. 1957 Atmospheric Carbon Dioxide started current increase
3. 1975 Earth warming started
4. 2017 to date over 800 million hectares (2 billion acres) have been deforested out of 70.4 billion hectares

**1 billion** tons of carbon dioxide annually into the atmosphere from biomass burning.

**60 billion tons** of annual carbon dioxide consumption lost photosynthesis

Massive decay causing the rain-forest to change to an oxygen sink and carbon dioxide producer.

We have lost 20% of Earth's Oxygen supply.

<http://www.sciencemag.org/news/2015/03/amazon-rainforest-ability-soak-carbon-dioxide-falling>

**This is an international emergency.**

City Sprawl cause of photosynthesis loss is 1 billion ton of carbon dioxide consumption per year.

Re: my presentation

To: research@cctruth.org

You replied to this message on 5/28/2018 8:46 PM.

I will be going to meet them, Tomorrow, but I love your science and I would be happy if you can make a presentation through our online platform of any topic related to climate change.

You will have to send me a facebook friend request.

I will get the feedback for you.

Please send me your presentation too.

My research and funding request.

- 1. Ocean evaporation for better weather modeling.**
- 2. Amazon Rain-forest reforestation.**
- 3. Vertical and Horizontal Carbon Dioxide Diffusion.**

My paper published in the International Journal of Environmental Science and Development  
Volume 4 Number 9.

**Discovery: Reduction in photosynthesis correlation to carbon dioxide increase.**

Last Thursday I presented those findings at the 2018 Climate Change Conference in NYC. All the scientists at the conference agreed with the findings. Dr. Gbuje Daniel Chidubem the IPCC representative is taking my presentation back to the IPCC.

The recent rise of Atmospheric CO<sub>2</sub> is NOT caused by carbon emissions. They correlate to only 363 ppm. The cause is massive loss of photosynthesis mainly from the deforestation of the Amazon rain-forest. The correlation to Amazon rain-forest is perfect and continues today.

The deforestation started in 1950 and the CO<sub>2</sub> rise started in 1957. Over 2 Billion acres deforested. Because of this the rain-forest has changed to an oxygen sink and a carbon dioxide producer. Temporary loss of 1.5 to 2.5 trillion annual tons of carbon dioxide consumption. This is 45 times our output of 32 annual tons. The atmospheric winds mix the carbon dioxide very well, so the concentration stays constant. Stop the deforestation and burning in the Amazon rain forest now! We need to plant 100 million shrubs in the next two years by the government policy document at [cctruth.org](http://cctruth.org). Dr. Andy Miller of the EPA's Climate Change research group has given me complete responsibility to bring down Atmospheric CO<sub>2</sub>.

Additional findings:

Carbon dioxide does not freeze in the upper atmosphere.

The ocean is not a sink for Atmospheric carbon dioxide.

**Solution:**

We need to stop destroying the Rain Forests. All nations need to put pressure on Brazil and all south America to stop this.

- 1. Moratorium on Rain-forest deforestation starting now! Not one more acre.**
- 2. 10-year delay in burning. Then 10% per year for 10 years. Stop burning now!**

3. Plant native trees and shrubs all over the world. 100 million new in 2018-2019. Increase Photosynthesis.
4. Stop deforestation in India and everywhere which is not sustainable.

## Rainforest facts.

### 2 Billion acres deforested since 1950.

#### Timeline

1. 1950 start deforestation
2. 1957 Atmospheric Carbon Dioxide started current increase
3. 1975 Earth warming started
4. 2017 to date over 800 million hectares (2 billion acres) have been deforested out of 70.4 billion hectares

**1 billion** tons of carbon dioxide annually into the atmosphere from biomass burning.

**60 billion tons** of annual carbon dioxide consumption lost photosynthesis

Massive decay causing the rain-forest to change to an oxygen sink and carbon dioxide producer.

We have lost 20% of Earth's Oxygen supply.

<http://www.sciencemag.org/news/2015/03/amazon-rainforest-ability-soak-carbon-dioxide-falling>

**This is an international emergency.**

City Sprawl cause of photosynthesis loss is 1 billion ton of carbon dioxide consumption per year.

You replied to this message on 5/28/2018 8:46 PM.

I will be going to meet them, Tomorrow, but I love your science and I would be happy if you can make a presentation through our online platform of any topic related to climate change.

You will have to send me a facebook friend request.

I will get the feedback for you.

Please send me your presentation too.
