

The IPCC Ignores Key Data, (<https://ctruth.org/ipcc.pdf>) that shows how the reports of the Intergovernmental Panel on Climate Change (IPCC) ignore key data, resulting in simulations that are invalid. New information brings The Intergovernmental Panel on Climate Change (IPCC) Reports into question. Earlier we sent expert review of IPCC SR 1.5, Chapter 2, "Mitigation", to 5000 scientists and worldwide media by email with delivery and read receipts. They read it. One NOAA scientist suggested we go after the publishers of the IPCC reports. (If we had the funds, we would.) When we showed the IPCC simulations to an expert in simulations, he started laughing uncontrollably. Our 20 PhD review of the mitigation chapter caused the Mitigation working group to move the statement Jim Skea had used to say we need to lower emissions which had no references. They made it up. Also their probability for their solution to work to lower atmospheric carbon dioxide is 50-66%. These are now the 5th paragraph in the [executive summary](#).
